

Abstract of the Disclosure

5 A pluggable server module (PSM) (10) for remote controlling of a device (11) is provided. The PSM (10) comprises a wireless transceiver (1), a server remote control logic (4) and a standardized interface and connector (5). The wireless transceiver (1) is connected to the computing means (2, 3). The computing means (2, 3) is connected to the server remote control logic (4), and the server remote control logic (4) is connected to the standardized interface and the connector (5). In use the PSM (10) is plugged into a device (11) to be controlled via a standard interface and connector (5).
